

HEADTRACKER

Put Your Head in the Game!

TRAKIR is a high-performance headtracking system that enables hands free view control in popular games and simulators such as MS Flight Simulator, Lock On: Modern Air Combat, Forgotten Battles, and many more. A slight turn of the pilot's head causes their in-game view to pan in any direction, independent of mouse, keyboard, and joystick commands. Look out windows and around the cockpit as if you were in a real plane! Experience amazingly faster, more accurate targeting in combat situations.

TRAKIR delivers maximum value with increased precision and is based on a new image processor, delivering a truly immersive experience!

NaturalPoint® **TRACKIR 4 Pro™**

TRAKIR uses infrared light to track your head movements in much the same way as the ultra-expensive targeting systems used by the military. As you move your head, the **TRAKIR** sends a real-time stream of instructions to your computer via USB to move the mouse pointer or pan your view in game play. Definitely 'state of the art' technology!
